

Unified access to
all your files with Foldr

What does Foldr do?

Foldr gives you the power to access and control all of your files in one location

Combine your cloud and on-premise storage accounts to view, edit and collaborate on your files from one simple interface, with dedicated apps for all your devices.

Foldr for business

The typical business today is in a transition both technologically and culturally. The introduction of cloud technology has changed the way organisations manage their infrastructure and traditional on-premise environments are now moving to more of a 'hybrid' setup. At the same time, the traditional workforce is changing. The '9-to-5', in a lot of cases, is a thing of the past and there is an ever increasing need for employees to be able to access technology on the move or from home.

File access/management is a key area that companies have been trying to simplify because of the following factors:

-  • Files stored on-premise
-  • Access to files from offsite locations
-  • Some files stored in the cloud
-  • A multi-device environment
-  • A mobile workforce

So how do we manage this?

With Foldr – Foldr bridges the gap between your on-premise file servers and your cloud storage, providing a single access point for all of your files. With apps for Windows, Mac, iOS, Android and web, it doesn't matter whether you are in the office, working from home or on the move, your files are accessible at the click of a button.

Foldr's features

No VPN needed

Foldr makes your existing on-premise storage easily and securely available without the need for a VPN or other 3rd party connection.

Unified access

Create a single window to all your files by integrating access to your on-premise file servers with all your cloud storage locations (OneDrive, SharePoint, Google Drive, Box, Dropbox etc.)

Apps for all devices

iOS, Android, Windows, Mac, Web, Chrome Extension
Active Directory (AD) authentication – Foldr uses your existing Active Directory to sync all your user accounts access and permissions.

Cross platform search

Foldr's powerful search tool will index files across all your storage locations whether on-premise or in the cloud.

User collaboration

Share and collaborate on files/folders with other AD users and groups.

External sharing

Large file to share? Create a dynamic link to content through Foldr. For added security you can either add a password or create an external account which will allow external users to upload files back

Complete SSO solution

Foldr can act as a SAML SSO Identity Provider (IdP) or Service Provider (SP).

Easy to deploy:

- A lightweight virtual appliance built for any popular Hypervisor
- Installed in minutes, with a low system requirement: 1vCPU, 2GB Ram, 50GB disk space for the base system.

Security

In addition to the security features built into your existing storage infrastructure, Foldr offers you a further level of security:

2-factor authentication

With 2-factor authentication, Foldr ensures that anyone accessing your information is who they say they are.

Data Protection

Foldr's advanced auditing and visualisation tools allow you to see who's accessing and sharing files/folders, and ensure that nothing is available to the outside world if you don't want it to be.

End-to-end encryption

Everything in Foldr uses HTTPS/SSL (TLS), so files remain encrypted in transit for ultimate peace of mind.
